- Yuhao Gao (gyh072)

Where did you live before MDS, and what is one thing you miss about it?

Yuhaol lived in Cambridge for three years before MDS. The thing I missed about was my friends & the time we played together.

Michael I lived in Winnipeg Manitoba. I miss my cat, Croissant

Muhaimin I lived in Bangladesh and I miss all the friends and family I left there.

Alice I have always lived in Vancouver, so I didn't have to relocate for MDS! That said, I do miss having more free time to explore the city's parks, seawall, and local coffee shops without a busy academic schedule.

What did you do before MDS: a degree, a job, or both?

Yuhao I finished my undergraduate degree.

Michael I worked at the NML for the past 10 years doing research on ebola

Muhaimin I did both. Did a master's in Economics and I also worked as an advertiser.

Alice Both! I completed a Bachelor of Science in Mathematics (Statistics and Data Science) at the University of Macau. On the professional side, I worked as a Machine Learning Engineer Intern at M2M Tech Inc., an Assistant(Data Analyst) at Sun Life Financial Inc.

What made you apply to MDS?

Michael I wanted to advance my career into the biotechnology

Yuhaol didn't want to study any pure or theoretical things.

Muhaimin I loved working with data in my Master's. That piqued my interest in data science.

Alice I applied to MDS to build on my background in statistics and computer science by mastering the end-to-end data science value chain. The program's practical focus on extracting, analyzing, and presenting data insights aligns perfectly with my goal to help organizations make data-driven decisions.

What is one thing you want to be able to do by the end of the program?

Yuhao Find a job and survive. Find a chance to work in America.

Michael I want to be able to use AI in the world of biochemistry

Muhaimin I want to be able to handle big datasets and extract great, workable insights from the data. I also want to be able to build myself in order to work in the energy or healthcare sector.

Alice By the end of the program, I want to seamlessly design, train, and deploy production-ready machine learning pipelines to solve real-world problems.
